ACKNOWLEDGEMENT

We are greatly indebted to our mini project guide **Dr. A. M. Rajurkar** for her able guidance throughout this work. It has been an altogether different experience to work with her and we would like to thank her for her help, suggestions and numerous discussions.

We gladly take this opportunity to thank **Dr.Rajurkar A.M.** (Head of Computer Science & Engineering, MGM's College of Engineering, Nanded).

We are heartily thankful to **Dr. Lathkar G. S.** (Director, MGM's College of Engineering, Nanded) for providing facility during progress of mini project, also for her kindly help, guidance and inspiration.

Last but not least we are also thankful to all those who help directly or indirectly to develop this seminar and complete it successfully.

With Deep Reverence,

Darshdeep Singh Dutta[110]

Shivam Jatale[115]

ABSTRACT

MH26 Services is a hyper local on-demand service marketplace developed to organize and digitize local service providers such as plumbers, electricians, and cleaners within the Nanded region. The system aims to bridge the gap between customers and verified service professionals through a unified web-based platform. Built using the PERN stack (PostgreSQL, Express, React, and Node.js), the application supports secure authentication, role-based access, and real-time booking updates. A structured provider on boarding process ensures service quality through verification and approval workflows. The booking module incorporates collision checks and real-time notifications to handle concurrent service requests efficiently. Security mechanisms such as JWT authentication, request validation, and rate limiting are implemented to safeguard user data. The project demonstrates how modern web technologies can be applied to solve real-world problems in the unorganized service sector while maintaining scalability and reliability.
